

FNB SALES REPORT

Presentation

Prepared By:
TOY MOGOHLWANE

Analysis period:
13 DEC 2013 - 16 Nov 2016

Introduction

This project analyses FNB sales data to understand sales performance, product performance, profitability, promotional activity and sales patterns over time.

The analysis was conducted to transform raw sales data into meaningful business insights that can support better decision-making.

Business Problem & Objectives

The main Objective

The main objective of this analysis was to understand the factors affecting sales performance and profitability.

The analysis focused on:

- * Measuring overall sales performance
- * Analysing units sold
- * Understanding gross profit
- * Identifying high- and low-performing products or categories
- * Analysing sales trends over time
- * Comparing promotional and non-promotional performance
- * Understanding sales patterns by day classification
- * Providing recommendations based on the findings

Price Elasticity Analysis

- **Price Elasticity Analysis**

- The price elasticity analysis was used to measure how changes in product prices affected the quantity sold during promotional periods.
- Promotion 1: Price Elasticity = -2.41
- Promotion 2: Price Elasticity = -11.43
- Promotion 3: Price Elasticity = -12.51

- **Key Insight**

- All three promotions showed elastic demand, meaning that changes in price were associated with proportionally larger changes in quantity sold.
- Promotion 3 recorded the highest elasticity magnitude (-12.51), followed by Promotion 2 (-11.43) and Promotion 1 (-2.41).

Monthly Sales Trend

- Monthly sales fluctuate across the analysis period.
- The trend helps identify periods of stronger and weaker sales performance.
- Comparing monthly performance can help identify changes in customer demand.
- Monthly sales trends can support business planning, inventory management and future sales strategies.

Promotion Performance

5.1M
Promotion 3

Normal Price

611.07k
Promotion 1

3.5M
Promotion 2

Profitability Analysis

Key observations:

- * Gross profit varies across products/categories and periods.
- * Products with high sales may not always generate the highest profit.
- * Comparing sales with gross profit provides a broader view of business performance.

-6.31M Normal price

13.99k Promotion 1

604,04k Promotion 2

191.55k Promotion 3

Profitability Analysis

PROFITABILITY ANALYSIS

Gross Profit & Profitability Performance

The analysis evaluated gross profit to understand whether the product generated a profitable return after accounting for the cost of sales.

Overall Results

- Total Sales: R186,909,828.26
- Total Units Sold: 5,279,872
- Total Gross Profit: -R7,116,281.19
- Average Units Sales Price: 5014.12
- Overall Gross Profit Margin: -3.81%
- Gross Profit per Unit: -R1.35

KEY FINDINGS

- The business generated ****R186.91 million** in sales across the analysis period.
- A total of ****5.28 million units**** were sold.
- Despite the high sales volume, the overall gross profit was ****negative at R7.12 million**
- The overall gross profit margin was approximately **** -3.81% ****, indicating that cost of sales exceeded sales on an overall basis.
- Gross profit also varied across months and promotion periods, as shown in the dashboard.

KEY FINDINGS

Key Insights from the Analysis

- The analysis produced several important business insights:

1. Sales Performance

- Sales performance varies across the analysis period, with identifiable high- and low-performing periods.

2. Product Performance

- Different product categories contribute differently to total sales and units sold.

3. Profitability

- Gross profit provides additional information beyond sales and helps identify the financial contribution of different products and periods.

4. Promotions

- Promotional and non-promotional periods show different sales patterns, which should be evaluated using both sales and profitability.

5. Day Performance

- Sales patterns differ across day classifications, providing useful information for operational planning.

RECOMMENDATIONS

Business Recommendations

Based on the analysis, the following actions can be considered:

1. Monitor High-Performing Products

Continue monitoring products and categories that contribute strongly to sales and profitability.

2. Investigate Low-Performing Periods

Analyse periods with lower sales to identify possible causes and opportunities for improvement.

3. Evaluate Promotions

Measure promotional performance using sales, units sold and gross profit rather than sales alone.

4. Improve Operational Planning

Use day-level sales patterns to support inventory, staffing and resource planning.

5. Monitor Performance Regularly

Use the dashboard to continuously monitor KPIs, sales trends and profitability.

CONCLUSIONS

Conclusion

The FNB sales analysis provided a clearer understanding of sales performance, product contribution, profitability, promotional activity and sales patterns.

The dashboard brings these findings together in an interactive format, making it easier to monitor business performance and identify areas that require further investigation.

Overall, the analysis demonstrates how data can be transformed into meaningful business information that supports informed decision-making.
